

## Foursteel Fusion Table Assembly

**Important! Read the directions and study the pictures—it makes all the difference.**

*Matthew Burak*

**Everything needed to assemble your Foursteel Fusion table is supplied.**

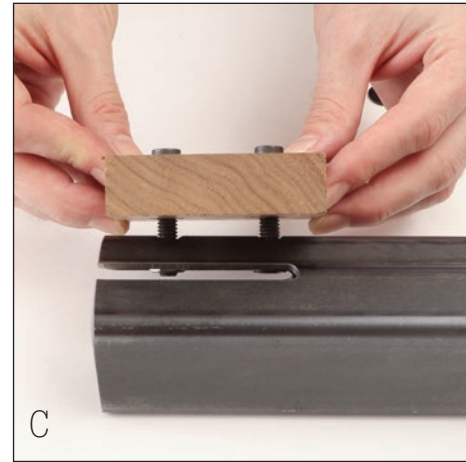

- 4 Foursteel table legs
- 1 table top with pre-installed aprons
- 8 mounting bolts
- 8 washers
- 4 corner blocks
- Allen (hex) wrench
- No additional tools required!*

## 1: Loosely attach corner blocks to the legs.

A and B: Align the mounting block and thread the bolt (with washer) into the threaded rivets at the top of the leg.

C: Do not tighten!  
There should be a gap between the legs and the corner blocks, as shown.

## 2: Install the legs.

Slide the notches at the top of the leg into the tabs on the apron—the corner blocks should fit into the notches on the aprons.

Correct alignment

## 3: Tighten the legs.

Using the supplied wrench, tighten each bolt until it stops turning and the wrench handle begins to spring back.

---

## 4: Turn your table over and enjoy!

*We recommend  
taping this  
tool to the  
underside of  
your table.*

### **Keep this tool in a safe place!**

You will want to remove your legs if you move.  
Or snug up the bolts should they loosen.
